

SIDE SHELF MODEL CAD-SK-26 (ITEM 70998)

Thank you for purchasing the CAD-SK-26 side shelf for your DCS outdoor grill and cart, or refrigeration product. We hope you enjoy the style and functionality of this useful companion product, and that it will increase the enjoyment of your outdoor grilling experience.

The installation instructions included with your new shelf denote the side shelf model as CAD-SK (Item 70853). This flyer will inform you of a slight difference between the CAD-SK and CAD-SK-26 model shelves.

You may have noticed that the instructions included with your CAD grill cart show the overall length of the side shelf as 24". The overall length of the CAD-SK-26 is approximately 25-1/2".

The additional length of the CAD-SK-26 does not impact the shelf area itself, so there are no concerns if you have also purchased the model CAD-WBC (Item 70861) cutting board to use with your shelf.

The installation of your CAD-26-SK side shelf is identical to the model CAD-SK shelf. Please follow the steps shown in the enclosed installation instructions.
